# BLADE BAIT

**Blade baits are lures that effectively fill the gap in modern spinning. We present several advantages that distinguish them from popularly used lures.**

Short, dense high-frequency vibrations generate unprecedented aggression in the water, attractive to most predators. Strong vibrations translate into the quality of fishing, making it comfortable even when the lure is at a depth of several meters. The specifics of the blade baits allows them to present their work where most lures will not work. Among others, in small spaces, in technically difficult places, such as holes between pile-ups, narrow river troughs and the surroundings of sunken trees. The design of the blade baits allows them to be used in shallows, at half depth of the water, as well as near the bottom. The advantage that anglers value is their excellent aerodynamic properties. The large casting range, unattainable for other lures of similar weight, guarantees effective fishing even during very strong winds. A characteristic feature of the blade baits are the holes placed on the back of the lure to which the safety pin is fastened. Their skillful selection during spinning gives the opportunity to present the lure in different parts of water and give it a work tailored to the preferences of fish.

# ORIGINALS

**The Originals series consists of jig spinners, made of heavy metal alloy, which have been in SPINMAD's offer for over 10 years. We present five models in different size, weight and application.**

The effectiveness of Originals lures results from their excellent work, strong vibration of the body and strong light reflections of the rotating wing. This group of lures consist of five models from 4 to 35 g. Each of them works well during uniform twisting of the line, but the biggest advantages of these lures can be seen during jigging. Jig spinners generate a well-perceptible vibration and, like blade baits, have an extraordinary casting range, not attainable for other lures of similar weight. All the models in this category, like the other SPINMAD lures, are handmade and hand-painted. We put impact on every smallest detail.

# JIGMASTER

**The Jigmaster family of jig spinners consists of three models available in 8g, 12g and 24g. When designing the series, we made every effort to obtain versatile lures that work in all conditions, on all waters, the main purpose of which is fishing for specimens.**

Aggressive, well felt work, free fall, accompanied by strong light reflections and a triple anchor are all features of the pike lure. The design of Jigmaster lures enables effective fishing in shallows and fisheries with variable depths. Thanks to the high sensitivity to rod movement, you will get convinced that these are the number one lures for technically difficult fisheries and places covered with underwater vegetation. Handicraft quality, durability and the use of our iconic colour versions opens up a new chapter of fishing adventures for spinningists, in which Jigmaster lures will play the main role.

# **PRO SPINNER**

*designed by SPINMAD*

**One lure, many possibilities. This is how PRO SPINNER lure can be briefly introduced. However, it is good to know all its advantages, because we guarantee that you have never had such a versatile and functional jig spinner in your box before.**

PRO SPINNER is a lure with a length of 85 mm and a weight of 11 g, which is an accurate imitation of a small fish. Optimally selected weight makes the lure effective in an incredibly wide range of depths. The design of the lure allows you to effectively fish at a depth from only 0,5 m to even 6 m. PRO SPINNER works well everywhere. You can use the lure in smaller and larger lowland rivers, oxbow lakes, mountain rivers, as well as lakes, dam reservoirs and gravel pits. PRO SPINNER is characterized by dense, minor but expressive vibration which not only attracts the fish perfectly, but also improves contact with the angler. The elongated shape and proper balance of the body provide new possibilities of presentation. Except for the uniform pull and jiggling of the lure, the method which also works perfectly is jerking. PRO SPINNER is a complete and versatile lure that can handle all conditions and its purpose is to catch perch, pike, trout, asp and zander.

# CRAZY BUG

**Contact with nature, trying to understand it and drawing inspiration from it is an assumption that we have been incorporating into the production of our lures for years. To get closer to nature, we have prepared a series of CRAZY BUG lures imitating worms, insects and beetles.**

The assumption of the series was to create lures that resemble the natural food of many species of fish. CRAZY BUG lures were designed for fishing in shallow fisheries in the surface water zone and in midwater. The model fisheries are small, trout rivers, medium and large lowland and mountain rivers and shallow, heavily overgrown stagnant water reservoirs. CRAZY BUG lures are best lead near stony bands, on reefs, near underwater obstacles or overhangs of trees. In stagnant water also among water-lilies, underwater vegetation and reeds. The use of appropriate construction and balance results in exemplary accuracy of casts, immediate work and many handling options. Due to the light weight, free fall, interesting colour versions and the possibility of smudging, the CRAZY BUG jig spinners are a good offer for trout, chub, perch and pike hunters.

# IMPULSE PRO

**The conclusions drawn during the creation of IMPULSE lures and the market demand for a smaller lure supplementing this series set us a challenge, which resulted in the creation of the perfect bait.**

After months of preparation, tests and time devoted to refining the details, this description fits perfectly with the latest IMPULSE PRO lure. Even smaller body and weight of the lure make it an effective tool in the hands of every spinner. Amazing, tempting work combined with selected colours and attention to detail will certainly appeal to fans of twitching and jigging, IMPULSE PRO is the bait for professionals that will open any water and outsmart every predator, because they imitate their natural food. The series consists of 6 wobblers in natural and fancy colors armed with high-quality durable VMC treble hooks.

# KOGUT JIGS

**Every spinningist knows how effective kogut jigs are for zanders! Long ago, we noticed enormous potential in them.**

Initially, we created them for our own needs, but after spinning thousands of lures and catching many great fish on them, we decided to share our knowledge and skills by introducing kogut jigs to the Spinmad offer.

The unique design, durability and handicraft precision are the features that only the best lures have. There is no room for mediocrity, which is why every kogut jig is made of the highest quality materials, which are WAPSI feathers and chenille. In combination with a wide range of selected colours, the weight engraved on the heads, and many years of experience in the production of lures, we present you a product that will meet the expectations, satisfy and even surprise the most demanding anglers who thought that they knew everything about kogut jigs.
