BLADE BAIT

Blade baits are lures that effectively fill the gap in modern spinning. We present several advantages that distinguish them from popularly used lures.

Short, dense high-frequency vibrations generate unprecedented aggression in the water, attractive to most predators. Strong vibrations translate into the quality of fishing, making it comfortable even when the lure is at a depth of several meters. The specifics of the cicadas allows them to present their work where most lures will not work. Among others, in small spaces, in technically difficult places, such as holes between pile-ups, narrow river troughs and the surroundings of sunken trees. The design of the cicadas allows them to be used in shallows, at half depth of the water, as well as near the bottom. The advantage that anglers value is their excellent aerodynamic properties. The large casting range, unattainable for other lures of similar weight, guarantees effective fishing even during very strong winds. A characteristic feature of the blade baits are the holes placed on the back of the lure to which the safety pin is fastened. Their skillful selection during spinning gives the opportunity to present the lure in different parts of water and give it a work tailored to the preferences of fish.

TAIL SPINNERS

The second group of lures in the Spinmad offer are tail spinners. There are three series of lures in this category: Originals, Jigmaster and Crazy Bug. Every year there are more and more fans of these amazing lures.

The vibrating body and the rotating palette (tail), generating strong light reflections, arouse fish's interest even when the lure is guided in the simplest, classic way by uniformly winding the line. However, the advantages of tail spinners are revealed only when jigging in deeper areas of the fishery and in technically difficult places. The design of the lure allows fishing in all parts of water, even in fisheries covered with underwater vegetation, without the effect of twisting the line.

ORIGINALS

The Originals series consists of tail spinners, made of heavy metal alloy, which have been in SPINMAD's offer for over 10 years. We present five models in different size, weight and application.

The effectiveness of Originals lures results from their excellent work, strong vibration of the body and strong light reflections of the rotating wing. This group of lures consist of five models from 4 to 35 g. Each of them works well during uniform twisting of the line, but the biggest advantages of these lures can be seen during jigging. Tail Spinners generate a well-perceptible vibration and, like blade baits, have an extraordinary casting range, not attainable for other lures of similar weight. All the models in this category, like the other SPINMAD lures, are handmade and hand-painted. We put impact on every smallest detail.

JIGMASTER

The Jigmaster family of tail spinners consists of three models available in 8g, 12g and 24g. When designing the series, we made every effort to obtain versatile lures that work in all conditions, on all waters, the main purpose of which is fishing for specimens.

Aggressive, well felt work, free fall, accompanied by strong light reflections and a triple anchor are all features of the pike lure. The design of Jigmaster lures enables effective fishing in shallows and fisheries with variable depths. Thanks to the high sensitivity to rod movement, you will get convinced that these are the number one lures for technically difficult fisheries and places covered with underwater vegetation. Handicraft quality, durability and the use of our iconic colour versions opens up a new chapter of fishing adventures for spinningists, in which Jigmaster lures will play the main role.

CRAZY BUG

Contact with nature, trying to understand it and drawing inspiration from it is an assumption that we have been incorporating into the production of our lures for years. To get closer to nature, we have prepared a series of CRAZY BUG lures imitating worms, insects and beetles.

The assumption of the series was to create lures that resemble the natural food of many species of fish. CRAZY BUG lures were designed for fishing in shallow fisheries in the surface water zone and in midwater. The model fisheries are small, trout rivers, medium and large lowland and mountain rivers and shallow, heavily overgrown stagnant water reservoirs. CRAZY BUG lures are best lead near stony bands, on reefs, near underwater obstacles or overhangs of trees. In stagnant water also among water-lilies, underwater vegetation and reeds. The use of appropriate construction and balance results in exemplary accuracy of casts, immediate work and many handling options. Due to the light weight, free fall, interesting colour versions and the possibility of smudging, the CRAZY BUG tail spinners are a good offer for trout, chub, perch and pike hunters.

IMPULSE

The IMPULSE series of wobblers is characterized by an elongated body shape with high strength and stability in water, reminiscent of minnow type fish.

Three mounting holes allow adjustment of work, vibration strength and depth of guidance. Precise load distribution affects the perfect balance of the lures, their unique work and the ability to fish in a wide range of depths. The metal mouth increases the acoustics of the lure during contact with the bottom, and a subtle rattle built inside the body emphasizes its work. IMPULSE wobblers are characterized by natural, shimmering and very dense work, and the clear vibrations of the body increase the angler's contact with the lure. The effectiveness and versatility of these lures can be verified when fishing in rivers and in stagnant water, also in places of varying depth and varied bottom. MPULSE lures work well when jigging in the depths and at the bottom, as well as when uniformly reeling the line or holding it in the current. The design also enables effective vertical fishing. The use of strong anchors of the legendary VMC company will certainly appeal to pike, zander, asp, catfish and big perch hunters.

IMPULSE PRO

The conclusions drawn during the creation of IMPULSE lures and the market demand for a smaller lure supplementing this series set us a challenge, which resulted in the creation of the perfect bait.

After months of preparation, tests and time devoted to refining the details, this description fits perfectly with the latest IMPULSE PRO lure. Even smaller body and weight of the lure make it an effective tool in the hands of every spinner. Amazing, tempting work combined with selected colours and attention to detail will certainly appeal to fans of twitching and jigging, IMPULSE PRO is the bait for professionals that will open any water and outsmart every predator, because they imitate their natural food. The series consists of 9 wobblers in natural and fancy colors armed with high-quality durable VMC anchors.

KOGUT JIGS

Every spinningist knows how effective roosters are for zanders! Long ago, we noticed enormous potential in them.

Initially, we created them for our own needs, but after spinning thousands of lures and catching many great fish on them, we decided to share our knowledge and skills by introducing roosters to the Spinmad offer.

The unique design, durability and handicraft precision are the features that only the best lures have. There is no room for mediocrity, which is why every rooster is made of the highest quality materials, which are WAPSI feathers and chenille. In combination with a wide range of selected colours, the weight engraved on the heads, and many years of experience in the production of lures, we present you a product that will meet the expectations, satisfy and even surprise the most demanding anglers who thought that they knew everything about roosters.

ICE LURES

The SpinMad ice lure offer includes Nemo 3 g and Skat 6 g vertical blade baits and classic Ice Spinners armed with rigid hooks or triple anchors. Ice cicadas are lures that, when rising and lowering, make circles around smaller or larger curves, and vibrate and slide in depth to imitate small fish. Spinners, like all our lures, are handmade with attention to the smallest details. Ice fishing enthusiasts have been confirming their effectiveness for years.

PACKAGING

Spinmad lures are also available in single unit packages

SPINMAD CLOTHES

SOFTSHELL JACKET

- Softshell jacket with detachable hood,
- Waterproofness 14,000 mm,
- Breathability 2000 g / m² / 24h,
- Outer material: 94% polyester, 6% elastane,
- Inner material: 100% polyester - micro fleece,
- Provides protection against wind and rain,
- Two front pockets with zippers,
- Additional zippered chest pocket,
- Width adjustment of sleeves by velcro,
- Extended back panel of the jacket.

SOFTSHELL JACKET	
SIZES	L, XL, XXL
COLOR	Navy

Rain, wind and cold won't be an obstacle for you! Waterproofness at 14 000 mm speaks for itself. Let's add a spectacular design, functional pockets and logos of your favorite brand. Here we have a spring-autumn jacket made especially for you.

SPINMAD HOODIE

For fishing, to the city, for every day! This is our latest hoodie. Do you fish with SPINMAD lures? Do you want to show it by subtle logotypes? Put our new hoodie on and enjoy the comfort also after many washes.

- Material: 80% cotton, 20% polyester,
- Weight: 280 g / m²,
- Full-length zipper,
- Two pockets,
- Elastic welts,
- Fitted hood.

SPINMAD HOODIE	
SIZES	M, L, XL, XXL
COLOR	Navy

SPINMAD CAP

Comfortable and resistant to deformation SPINMAD cap can be of interest to the fans of our brand. Choose the modern design, go fishing and look at you friends who could get a little envious.

- Adjustable size,
- Material resistant to deformation,
- SPINMAD logo on the front

SPINMAD CAP	
SIZES	ONE SIZE
COLOR	Navy – Grey
